DAILY BACKUP

A daily backup is performed during the SHUTDOWN procedure. This saves all data in our main library, QS36F. If you do not run a SHUTDOWN every night then you should perform a **SAVEDAY** to back up your data. You should have a set of five daily save tapes marked with each day of the week. (Monday through Friday)

- Make sure all users are signed off.
- End FAX*STAR and OECNTL by typing in: **OEKILL**
- Once OEKILL has completed type: **SAVEDAY**
Your screen should look like this:

The screenshot shows a terminal window with the following text:

```
ve _____  
  
Date to assign to backup:      110994  
Initialize tape(Y/N)?         Y  
  
ENTER=Continue                F3=Exit
```

Enter in the date of which you are saving.

Yes, you do want to initialize the tape.

Press enter. This usually takes approximately 40 minutes but time may vary depending on the size of your system.
