

BILL OF MATERIAL

Understand Bill of Material

Bill of material is used to build kits.

1. From the Master Menu take option 2, option 13, then option 5.
2. You will key in the kit item number that you created in inventory master for this kit.
3. Next you will key in the one of the item numbers that will be in this kit, and hit <Enter>
4. You need to key in the qty of this item that will go in this kit.

Repeat step 2, 3, and 4 till you have the kit built.

Don't forget to do an inventory adjustment for your kit.

After you build X number of kits go into invadj and do an explained add to inventory. When you do this it will reduce you inventory of the required sub items that you have put into your kit and allow you to bill the kits with inventory.

Note: If you want to add labor you can by simply adding a labor inventory item to the kit.

In the options file maintenance Option: PSLIP Custom/Standard Packing Slip Options you have the option to Print Bill of Material "Component Items" on PSLP's (N/):

If you have any questions please give us a call.
