To Access the **NEW SECURITY** program released in V12 PTF: **PM112301**. You must use **QSECOFR** user ID to access this procedure. Before doing so you must set QSECOFR to be ***S36**, and have **WELDLIBR** as its current library. The name of the program to type in to access is PUSMNT. After installing this PTF you will **not** be allowed to access TAPGL unless you set-up what users have access to **TAPGL**, all other programs will be set to ALLUSERS. Below is a list of procedures you can now limit access to. We believe this program will give you the ability to protect your vital information from those who may not be trained in these areas. Additional areas of protection can be added at a small fee per procedure. As usual if you have any questions please give me a call @ 815-788-0850.
